

Identity security & governance for mortgage and consumer lenders

Linx is the AI-native identity governance platform consumer finance and mortgage companies use to remove access on time, govern contractors and service accounts, and hand auditors proof.

For security teams at mortgage and consumer lenders, identity governance means juggling all types of identities while facing audit and compliance pressure. Legacy solutions have limited visibility into the contractor and branch employee accounts that are core to the business, struggle with non-human identity governance, and lack automatic remediation tools. It's time for modern identity security that is built for your business' needs.

Ensure the right identities have the right access, to the right resources, at the right time.

Identity Visibility & Intelligence

See every human, non-human, and AI agent identity across your employees, branch employees, and contractors all in one platform, so you can surface and resolve orphaned accounts and misclassified service accounts.

Audit-Ready Reviews

Linx transforms access reviews from tedious, manual processes to automatic, easy-to-run workflows. Linx gives you AI-assisted approve/deny recommendations and the ability to revoke access directly from within the platform, all with audit-ready evidence.

Automation & Remediation

Find and terminate users who still have access, dormant accounts, and unowned service accounts directly in downstream and cloud apps, so even the smallest teams can easily close identity gaps.

Why busy financial services teams choose Linx

Unified Security & Governance

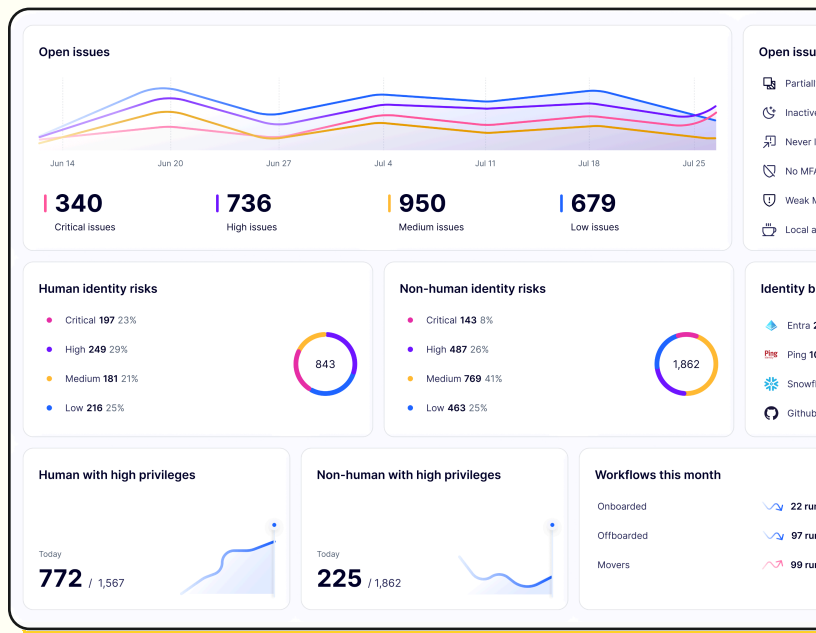

Linx replaces a patchwork of IGA + ISPM + scripts or dated legacy platforms with a unified platform that can see and fix identity risks across your environment.

Day One Value

Enable simple on- and off-boarding, service account governance, and access reviews without long waits, multi-year contracts, or dependency on professional services.

Power Tool For Busy Users

Built so security teams of all sizes can take meaningful actions without having to be certified on five different tools, or manually chase down lists of users and remediate risks.

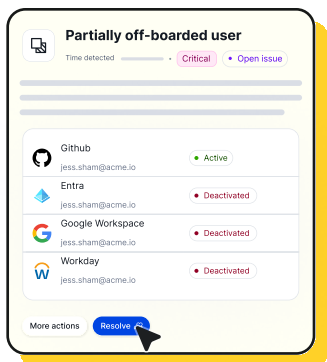

"Linx is revolutionizing the identity security and governance space. Legacy IGA can be overwhelming in both cost and effort resulting in diminishing or even negative ROI."

Jeff Farinich

Offboard with confidence for employees, contractors, and branch staff

With legacy solutions, role changes start in your directory, but the process silently fails before a termination can be completed or a role change can be updated. Partially off-boarded accounts build risk, access issues arise for movers, and work piles up for your team. Linx correlates across surfaces, and resolves these broken accounts in one-click or with automatic workflows.

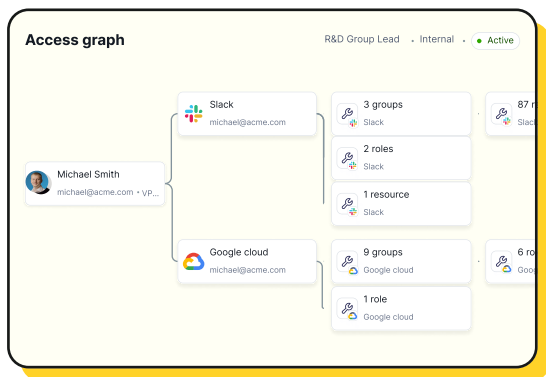

Non-human and Agentic Identity Governance

Yesterday's processes allow service accounts to accumulate without a way to remediate, and non-human identities become a major risk. Linx gives you the tools to discover, classify, and govern NHIs across cloud SaaS, and your directory, so you can bind service accounts to human owners and govern identities of all kinds.

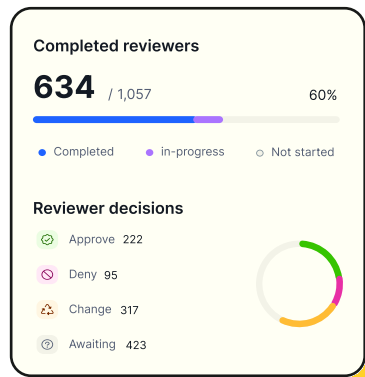

Govern the identities your HR system never sees

Instead of relying on patchwork solutions and manual processes to handle the lifecycle of contractor, branch employee, and non-employee identities, our platform links accounts to people across your environments. This allows for unified enforcement, automated workflows, and deeper access reviews so you can govern at scale.

Access reviews and off-boarding you can prove to auditors

Replace a broken chain of screenshots, spreadsheets, and bespoke scripts with Linx's automated user access reviews. The Linx platform will not only surface identity risks, but go further to provide in-platform remediation plus a log, cutting down on rubber stamping and improving audit-readiness.

"I wholeheartedly would recommend Linx to anybody, especially those that have dealt with some of the larger companies out there and have fought in trying to get them implemented and the complexity of it. I would stress to them that Linx is very quick to implement, and I would also stress to them that overall the company is fantastic to work with. We've built an amazing partnership with Linx in just a matter of weeks that we've been doing business."
