

Identity security & governance for food & beverage companies, made easy

Linx is the AI-native identity security platform food and beverage providers trust to see, govern, and fix identity risks across human, non-human, and agentic identities.

With a workforce that constantly changes – seasonal hiring, plant-to-plant transfers, and shift-based rehires – food and beverage producers and distributors need an identity system built to handle this speed and security risk. Without the right tools, IT teams lose valuable time with onboarding and off-boarding headaches while risk only grows as identities, both human and non-human, pile up. It's time for a modern identity security platform that is ready for the challenges you face.

Ensure the right identities have the right access, to the right resources, at the right time.

Lifecycle Governance

Automate your access reviews and onboarding and off-boarding workflows, so governing seasonal employees, rehires, and role changes is a breeze, even across entities.

Identity Visibility & Intelligence

See every identity, human and non-human alike, across all of your environments, plants, and systems so you can easily identify and resolve risks.

Automation & Remediation

Discover and address dormant, partially off-boarded, or unowned accounts, all without tickets or a dedicated identity team, saving countless hours for lean team...

Why food & beverage teams choose Linx

Unified Security & Governance

Go from no proper IGA solution and fragmented onboarding and off-boarding, to a supercharged platform that can see and fix across your HQs, plants, warehouses, and more.

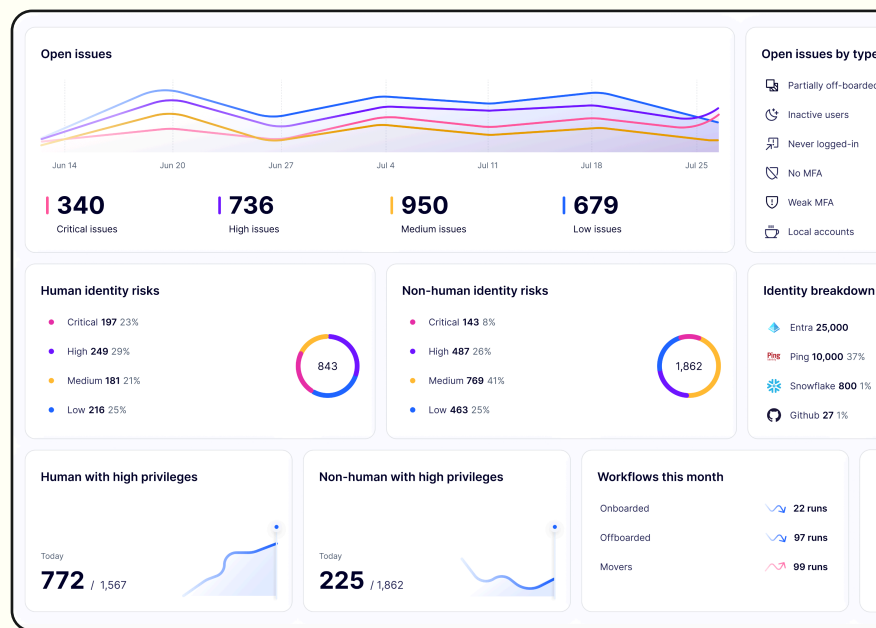

Day One Value

Out of the box functionality, so you can have working access reviews and lifecycle automation in weeks, not months or years

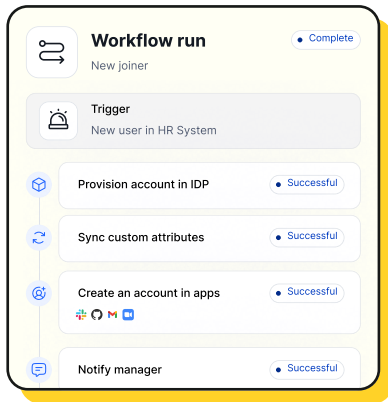

Power Tool For Busy Users

Built so security teams of all sizes can take meaningful actions without having to be certified on five different tools, no matter how small.

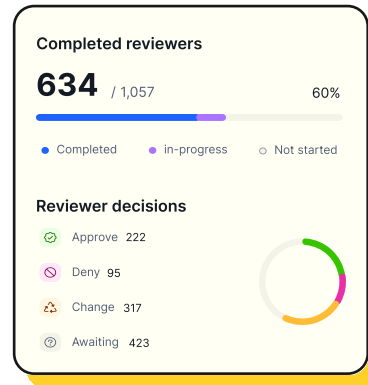

Automate onboarding and offboarding

Turn labor-heavy, days-long on- and off-boarding processes into automated workflows, saving time for teams with high turnover and seasonal rehires. Ensure that orphaned or partially off-boarded accounts become a thing of the past.

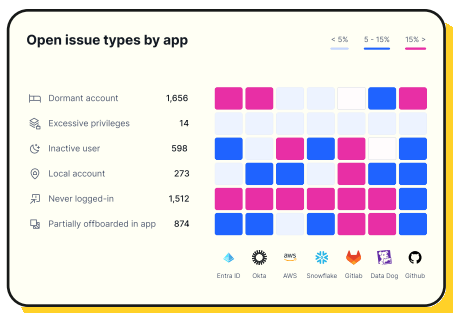

Modernize access reviews

Say goodbye to spreadsheet-driven access reviews, and say hello to automated access review campaigns that give you real, audit-ready evidence. The Linx platform is built to automate your access review campaigns, using AI and workflows to find issues at machine speed, provide a recommendation, then give you the power to remediate in-platform.

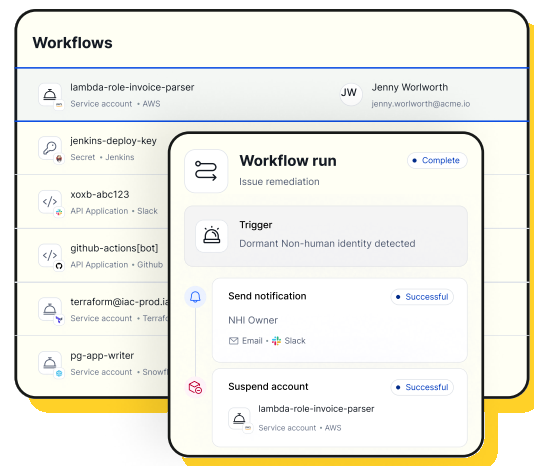

Find and fix orphaned, dormant, and misconfigured accounts

Linx gives you a comprehensive list of identity risks in your environment, the full context behind every identity, and the tools to fix these issues at scale and prevent similar pile up in the future.

Govern non-human and agentic identities

The Linx platform brings non-human and AI-agent identities into the same security and governance framework as every other identity in your business. With our tools, your team can automatically discover AI agents across your environment, govern them without separate programs, and then use our MCP Gateway to enforce policies in real time.

"We've seen more value in ten days with Linx than we saw in two and a half years using two legacy incumbent vendors."
